SUMMARY

Aspiring Software Engineer with a strong foundation in **Java, Python, SQL, OOP, DSA, REST APIs, and full-stack development**, with hands-on experience in **software automation and application development** through internships and projects. Seeking to contribute to **scalable software solutions** in a dynamic development environment.

EXPERIENCE

- Nasdaq | *Data Engineering Intern* | Bengaluru

Jan 2026 – Jun 2026

 - Automated onboarding effort estimation for Nasdaq Data Link datasets using **Python** and **GitHub Copilot Agents**, accelerating assessment workflows and reducing manual planning effort.
 - Built a **historical data quality framework** for **Trino** datasets using **Databricks Asset Bundles (DABs)**, automating validation checks for primary key integrity, null values, uniqueness constraints, and record counts while generating comprehensive audit trails, eliminating hours of repetitive manual QA efforts.
 - Designed and implemented automated data quality frameworks for production **ELT pipelines** using **Databricks DQX**, enabling primary key, uniqueness, date field, and partition column validations alongside remediation and quarantine workflows, improving data integrity, reducing manual intervention, and accelerating defect resolution.
- Infosys Springboard | *Artificial Intelligence Intern* | Remote

Oct 2024 – Dec 2024

 - Developed an AI-powered financial document analysis platform using **LLaMA 3.2 Vision**, automating information extraction, structuring, and analysis from financial documents.
 - Built a multimodal document intelligence application using **Python** and **Streamlit**, enabling natural-language querying, automated reporting, and interactive financial visualizations.

EDUCATION

- Sona College of Technology

2022 – 2026

Bachelor of Technology in Information Technology

CGPA: 8.84 / 10

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL
Core Concepts: Data Structures and Algorithms, Object-Oriented Programming, REST APIs, JWT Authentication
Web Technologies: React.js, Node.js, Express.js, HTML, CSS
Databases: MySQL, MongoDB, SQLite, Firebase
Tools & Platforms: Git, GitHub, GitLab, Jira, Postman, Vite
Coursework: Database Management Systems, Operating Systems, Computer Networks

PROJECTS

- TOMATO Food Delivery Platform | *React, Node.js, Express, MongoDB, JWT, Stripe*

 - Architected and deployed a **full-stack food delivery platform** featuring customer and admin portals, secure authentication, order management, and online payment processing.
 - Implemented scalable **RESTful APIs** using **Node.js, Express**, and **MongoDB** to manage products, carts, users, and orders while enforcing JWT-based authentication and role-based access control.
 - Integrated the **Stripe Payment Gateway** to enable secure online transactions and streamline the checkout experience.
- Smart Parking System | *Python, OpenCV, YOLOv8, HTML, CSS, JavaScript*

 - Developed a **computer vision-based smart parking system** using **YOLOv8** and **OpenCV** to detect vehicles and classify parking slot occupancy from real-time video streams.
 - Built an interactive web dashboard using **HTML, CSS**, and **JavaScript** to display live parking availability and enable real-time occupancy monitoring.

ACHIEVEMENTS

- Solved **150+ LeetCode and NeetCode problems** covering **arrays, strings, linked lists, stacks, queues, hash tables, trees, and graphs**.
- Ranked among the **Top 1%** nationwide in the **NPTEL Introduction to Internet of Things** certification examination with a score of **93%**.
- Secured **First Place** in a competitive Treasure Hunt by solving logic- and strategy-based challenges under time constraints.
- Organized and coordinated the technical quiz event **PORT 2025**, managing event execution and participant engagement.

CERTIFICATIONS

- **Programming in Java** – NPTEL
- **Principles of Generative AI** – Infosys Springboard
- **Artificial Intelligence Primer** – Infosys Springboard
- **Introduction to Internet of Things** – NPTEL
